

Photoshop lab route

Seven proposed core classes plus two proposed planning classes, each 70 minutes. Timings are estimates; your teacher selects labs and returns using actual responses. This does not reschedule the course calendar.

Teacher-review draft: per-action Photoshop captures, save/reopen workflow proof and an independent cold run remain pending.

Class	Route	Suggested time	Evidence
1 · Elements and principles	Slides 1–16; checks at 4, 8, 12 and 16	5 min opening notice; 32 min concept teaching; 8 min individual checks/correction; 15 min paper sketch and explanation; 10 min recap.	Point to an element, name a principle, explain how the relationship helps the intended reader.
2 · Colour, type and delivery	Slides 17–32; checks at 20, 24, 28 and 32	5 min no-notes retrieval/correction; 32 min teaching; 8 min checks; 15 min palette/type comparison on paper; 10 min clarification.	Name the colour model; give colours/type roles; diagnose spacing; distinguish pixels from PPI.
3 · Real campaigns and reasoning	Slides 33–45; checks at 36 and 40 plus the new-case response at 44	5 min recall; 18 min billboard walkthrough; 12 min colour/type campaigns; 20 min individual explanation; 10 min correction; 5 min lab choice.	Feature → concept → purpose, with one limitation. Independently analyse a different real advertisement.

Class	Route	Suggested time	Evidence
4 · Reading order and grouping	Photoshop labs 01 Hierarchy, 02 Alignment, 03 Spacing	5 min retrieval; 10 min teacher tool demonstration; 30 min selected controlled edits; 15 min reader test/revision; 10 min save/explain.	Before/after at identical size, layered PSD and explanation. Change one variable at a time.
5 · Palette roles and readable words	Photoshop labs 07 Complementary, 08 Analogous, 04 Contrast	5 min retrieval; 10 min teacher demonstration; 30 min palette/readability trials; 15 min changed-purpose comparison; 10 min save/explain.	Name the wheel and roles. Check text separately; a palette label alone does not establish readability.
6 · Typography and actual output	Photoshop labs 10 Font Choice, 11 Type Spacing, 12 Web Export	5 min retrieval; 10 min demonstration; 30 min type/spacing; 15 min export and reopen comparison; 10 min defence.	A fair type comparison, correct spacing diagnosis, layered master and inspected PNG/JPEG dimensions/bytes.
Planning A · Before class 7	12-slide planning presentation and guide stages 1–4	5 min recall; 12 min concepts/checks; 10 min brief; 25 min planning; 10 min explain; 8 min save/check.	Audience/action → free browser mood-board lab → editable scene + PNG → Photoshop artboard setup. Teacher verifies school saving and native transfer first.
Planning B · Before class 7	Guide stages 5–8	5 min recall; 8 min model; 20 min sketches; 10 min reader test; 12 min revise; 10 min save/check; 5 min defence.	Two different layouts, actual test record, revision and reopen/export checks.

Class	Route	Suggested time	Evidence
7 · Independent school-message design	Choose one approved director brief below	5 min verify facts/constraints; 10 min use approved plan; 25 min build; 10 min reader test; 10 min revise/export; 10 min defence/next target.	Your own decisions, initial/revised exports, PSD, test record and evidence-based explanation.

For every practice lab

1. Notice: identify the audience/message, locate the named layer and predict the effect.
2. Try: make the specified controlled change. Keep unrelated variables fixed. Retain the first attempt.
3. Prove: compare at identical viewing size, describe the visible difference and explain whether it serves the brief.
4. Change the brief with less help; test, revise and defend. Save an editable PSD and the required before/after exports.

[Open the complete lab guide.](#) Use the eight My supports options as needed; support does not reduce achievement automatically. The displayed poster previews are constructed examples, not Photoshop control screenshots.

Optional follow-up labs

05 Balance, 06 Repetition and 09 Gradient address diagnosed gaps or a relevant design need. They are not extra decoration to earn a higher grade.

Independent director choices

Use a real, teacher-approved school/community message. Confirm all wording, dates, locations and permissions before design; the descriptions below are choices of communication problem, not claims that an event already exists.

- **Library information:** make an actual opening-hours/service notice readable for a first-time visitor. The primary practical information must be easy to find.

- **Refill-station awareness:** communicate an approved action and location without making unsupported environmental statistics.
- **Club invitation:** invite the intended students to an actual approved activity. Include the real participation details and clear next action.
- **Arts/work showcase:** promote a confirmed display or opportunity using permitted original work. Preserve creator credit and readable visitor information.

Constraints and success

Make one 1080 × 1350 RGB image for the school digital display/phone context, unless your teacher supplies a different delivery size. Keep a layered PSD. Use original/permitted images and fonts. Include only essential approved information. Supply a PNG and a comparison JPEG; inspect the actual pixels/bytes and quality before choosing the delivered version. Explain a hierarchy decision, a named palette relationship with colour roles, a typography/spacing decision and one revision after feedback. The brief leaves the design decisions to you.

Reader test and defence

Ask a reader what they noticed first and what action the notice asks them to take. Record their actual response, identify a mismatch, make one change and retest. Do not invent positive feedback. Show the first and revised design, explain the evidence for your choice, then respond to a changed viewing size or audience. Tutorial completion is practice; your teacher reviews the product and explanation.

Later return

Next class: retrieve three relevant terms without notes and correct them. About a week later: diagnose a different notice and justify one change. These are proposed learning returns; no calendar or automatic grade is created.
